

Pt. 651, App. G

investigated. At this stage, any necessary contracts, funding, and manpower assignments must be initiated.

(f) Sample collection, data analysis, and coordination. The next step in the monitoring program is sample collection and data analysis. A nontechnical summary of the data analysis should be provided to the Public Affairs Office, which will handle routine information requests related to the program. Technical results from the analysis should be sent to the installation environmental office, which will coordinate them with the proponent. Other related coordination with the concerned public and other agencies, as arranged through development of the mitigation plan, will be handled through the environmental office.

(g) Continuation of program.

(1) If the mitigations are effective, the monitoring should be continued. However, even if a noneffective result is obtained, a nontechnical summary should still be sent to the Public Affairs Office. The Environmental Office and the responsible group should reexamine the mitigation measures with the experts. The problem may be either inadequacy of the mitigation measure, in the performance, or in the monitoring.

(2) Once the problem is identified, the responsible group and the experts should determine whether more detailed information is needed, whether the monitoring is being implemented incorrectly, or whether the mitigation is inadequate.

(3) After the problem is resolved, the group must determine whether a different monitoring system should be established. If the old program is adequate, it should be continued; however, if a different program is required, then a new system must be established.
